Friendly and approachable individual who is a team player and is also very adaptable. Equipped with knowledge of business intelligence tools such as QlikView and programming languages such as VBA.

Work Experience

Data Analyst Intern

STMicroelectronics

August 2016 to January 2017

My project is to create an interactive dashboard for Supply Chain to assist my department in their decision making process. I used SQL to query the data from databases (Oracle & MySQL, MS Access). I cleaned and transformed the data and displayed it in the form of tables and charts using an analytical software known as Qlikview. I have utilized straight tables, bar charts, stacked bar charts, combo charts and pie charts in my dashboards. Tables arrange data into columns and rows. Unlike bullet charts, bar charts are designed to display multiple instances, rather than a single instance, of one or more key measures. Stacked bar charts are a variation of the bar charts that is used to display business data. Combo charts is used as some data can be displayed best using bars, with an emphasis on individual values and local comparisons, and some using a line, with an emphasis on the overall shape of the data.

Education

Diploma

Skills

Microsoft Office (4 years), Microsoft Excel (4 years), Mysql (3 years), Qlikview (3 years), Data Analytics (3 years), Database Administration (3 years), Database Management (3 years), Data Entry (3 years)
